“Hi, my name is Dr. Janci Chunn Lindsay. I hold a doctorate in biochemistry and molecular biology from the University of Texas, and have over 30 years of scientific experience, primarily in toxicology and mechanistic biology.

In the mid-1990s, I aided the development of a temporary human contraceptive vaccine which ended up causing unintended autoimmune ovarian destruction and sterility in animal test models. Despite efforts against this and sequence analyses that did not predict this.

I strongly feel that all the gene therapy vaccines must be halted immediately due to safety concerns on several fronts.

First, there is a credible reason to believe that the Covid vaccines will cross-react with the syncytin and reproductive proteins in sperm, ova, and placenta, leading to impaired fertility and impaired reproductive and gestational outcomes.

Respected virologist Dr. Bill Gallaher, Ph.D., made excellent arguments as to why you would expect cross reaction. Due to beta sheet conformation similarities between spike proteins and syncytin-1 and syncytin-2.

I have yet to see a single immunological study which disproves this. Despite the fact that it would literally take the manufacturers a single day to do these syncytin studies to ascertain this [once they had serum from vaccinated individuals]. It's been over a year since the assertions were first made that this [the body attacking its own syncytin proteins due to similarity in spike protein structure] could occur.

We have seen 100 pregnancy losses reported in VAERS as of April 9th. And there have [also] been reports of impaired spermatogenesis and placental findings from both the natural infection, vaccinated, and syncytin knockout animal models that have similar placental pathology, implicating a syncytin-mediated role in these outcomes.

Additionally, we have heard of multiple reports of menses irregularities in those vaccinated. These must be investigated.

We simply cannot put these [vaccines] in our children who are at .002% risk for Covid mortality, if infected, or any more of the child-bearing age population without thoroughly investigating this matter.

[If we do], we could potentially sterilize an entire generation. Speculation that this will not occur and a few anecdotal reports of pregnancies within the trial are not sufficient proof that this is not impacting on a population-wide scale.

Secondly, all of the gene therapies [Covid vaccines] are causing coagulopathy. [Coagulopathy when the body's blood clotting system is impaired.] This is not isolated to one manufacturer. And this is not isolated to one age group.

As we are seeing coagulopathy deaths in healthy young adults with no secondary comorbidities.

There have been 795 reports related to blood clotting disorders as of April 9th in the VAERS reporting system, 338 of these being due to thrombocytopenia.

There are forward and backward mechanistic principles for why this is happening. The natural infection is known to cause coagulopathy due to the spike protein. All gene therapy vaccines direct the body to make the spike protein. Zhang et al in [a scientific paper published in the Journal of Hematology & Oncology] in September 2020 showed that if you infuse spike protein into mice that have humanized ACE-2 receptors on blood platelets that you also get disseminated thrombosis.

Spike protein incubated with human blood in vitro also caused blood clot development which was resistant to fibrinolysis. [Fibrinolysis is the body's process of breaking down blood clots]. The spike protein is causing thrombotic events, which cannot be resolved through natural means. And all vaccines must be halted in the hope that they can be reformulated to guard against this adverse effect.

Third, there is strong evidence for immune escape, and that inoculation under pandemic pressure with these leaky vaccines is driving the creation of more lethal mutants that are both newly infecting a younger age demographic, and causing more Covid-related deaths across the population than would have occurred without intervention. That is, there is evidence that the vaccines are making the pandemic worse.

It is clear that we are seeing a temporal immune depression immediately following the inoculations [see World Meter Global Covid deaths counts following inoculation dates] and there are immunosuppressive regions on spike proteins, as well as Syn-2, that could be likely causing this, through a T-cell mediated mechanism."
